DETAILED ACTION

After further consideration the finality of the final office action is withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 21-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 21 depends from a canceled claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 17 is rejected under 35 U.S.C. 102(b) as being anticipated by Solheim (4,653,758). Solheim discloses a golf ball comprising a corrugated parting line, which does not intersect or interfere with the dimples edges (fig 6). Claim 18, the dimples create a seamless appearance by appearing on either side of the corrugated parting line.

Art Unit: 3711

Claims 17 and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Sanchez (5,249,804). Claim 17, Sanchez discloses a golf ball comprising a corrugated parting line, which does not intersect or interfere with the dimples edges (fig 2). Claim 18, the dimples create a seamless appearance by appearing on either side of the corrugated parting line. Claim 24, the dimples create an icosahedron dimple pattern.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 19 and 21-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Solheim and Sanchez (each). Claim 19, Solheim and Sanchez discloses the parting line is offset from the dimples at the equator as shown in the figures but does not disclose a specific number. However, applicant's range of at least 0.001 inch appears to be satisfied as can be seen in the figures. Claims 21-23, as understood by the examiner, the parting line is a continuous waveform around the equator. The claims also appear to define a method of making the product that does not affect the final product. One of ordinary skill in the art would increase the range to prevent the parting line from crossing the dimple perimeter.

Claims 25 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Solheim in view of Sajima (2002/0019274). The primary references do not

Application/Control Number: 10/797,796 Page 4

Art Unit: 3711

disclose an octahedral or cube-octahedral dimple pattern. Sajima teaches a golf ball comprising octahedral or cube-octahedral dimple patterns. One of ordinary skill in the art would modify the dimple pattern for enhanced flight performance.

Response to Arguments

The final office action is being withdrawn in this action to further clarify the position of the Examiner. The status of claim 27 was inadvertently omitted in the final office action. Also, the Inoue reference is withdrawn as prior art. Claims 19 and 21-23 are now rejected under 35 USC 103(a). The rejection over claim 17 is maintained. Applicant argues the prior art does not disclose the dimples on one side of the parting line interdigitate with the dimple on the opposite side of the parting line. However, both references clearly show this feature in the figures. The dimples along the equator are separated by the parting line or interdigitate. Compare applicant's figures 7 and 8 with the prior art figures. There is no difference between the interdigitating limitations as shown in the figures.

Allowable Subject Matter

Claim 27 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3711

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raeann Trimiew whose telephone number is 571-272-4409. The examiner can normally be reached on Mon-Fri 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eugene Kim can be reached on 571-272-4463. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
